

DIAMOND COAT

Putting some Strike into your Ride

Product Coating List

Cobra - No Rust Coating

Suspension components take a beating both on road and off road. Traditional paints and powder coating still rust. Our Cobra no rust coating protects your parts by bonding to the metal forming a new strong substrate that will not rust, discolor, or flake. Our coating is so impact resistant that it can withstand the toughest rocks and debris the road or trail has to offer.

Black Mamba - Solid Dry Film

SOLID DRY FILM

BLACK MAMBA

Our Mamba series of Solid Dry Film coatings are used to increase the longevity of your parts. For internal engine parts our coating will help reduce wear due to friction and works great on Pistons, valve springs, bearings and other engine parts. For gears our hard faced coating helps increase the strength of your gear and increase the longevity and time between tear downs saving you money. These are great for racing gears. And our non-stick coating helps shed oil on pans and covers preventing sludge buildup.

Sidewinder - Heat Resistant

Sidewinder Heat Resistant coatings are a premier ceramic formula. Its inorganic matrix provides greater protection, and avoids the staining or bluing characteristics found with traditional chrome and stainless. This unique ceramic-aluminum coating process reduces radiant heat and ambient underhood temperature 40%+ while increasing horsepower. Performance benefits are attributed to: combustion chamber stabilization and reduced under hood temperature due to the improved air density; increased gas velocity due to the heat retaining properties of the coating; and better laminar air flow due to the elimination of oxide scale on the header's inside diameter.

Polished Aluminum

Semi-Gloss Black

Semi-Gloss Gray

Flat Red

Flat Blue

Flat Green

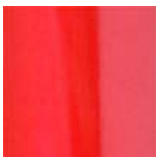

Coral - Color Coating

We take the powerful protection of our Cobra No Rust Coating and add a beautiful top coat of translucent color to bring you our new line of Coral Color Coated products. Not only can you get the custom or unique look you want in virtually any color you get the protection of your part. While traditional paints and powder coated products fail and allow rust our Coral coated products are protected because of our substrate bond even if you chip or scratch it.
